EXPERIENCE

Anthology / Polymath (YC backed) | ML Engineer, Freelance — Oct 2026 - Present

- Optimize model inference with PyTorch, CUDA graphs, and fused Triton kernels, working remotely with a team in San Francisco.
- Built batched **Kokoro-82M** inference and an isolated correctness/performance grader; H100 reference runs reached **1.44-1.50x baseline speed** with zero failures across **3,264 requests**.

Precision Design & Engineering | Generative AI Engineer Trainee — Sep 2026 - Present

- Built a custom harness: new tasks need only tools and context; cut cost and latency **over 50%**, accelerated development **10x**, and outperformed GPT-6-astra and Claude-Opus-5.5 with less capable models on internal tasks.
- Developed **Welga**, now being prepared for patenting and widely reused across the codebase for new computer vision tasks involving engineering drawings.

Anchorate | Co-Founder and CTO — Jan - Oct 2026 (10 months)

- Led a **team of 7** across system design, infrastructure, and PR reviews; designed **Anchor8** to inspect AI agent tool requests and results, block dangerous actions, and route ambiguous cases for human review.

BlinkAdz | Software Engineering Intern — Feb 2025 - Apr 2025

- Built backend and LLM workflows, including LinkedIn and LinkedIn Marketing API integrations, retrieval, orchestration, and deployment.

SELECTED ENGINEERING PROJECTS

Breader | Reading platform — breader.site | GitHub

- Built and operate an open-source reading platform with **6,600 users**, offline-first libraries, synchronized reading progress, browser-side speech, and book and manga readers.
- Profiled and removed response-copying overhead; local Docker load tests at 1,200 simulated readers recorded **583 requests/second**, **15-17 ms p95 latency**, and zero failures.
- Operate Docker services with PostgreSQL replication, Redis, Cloudflare R2, encrypted backups, retry-safe writes, Render failover, and an AWS EC2 service for fallback manga access.
- Designed global infrastructure with regional free-tier Render/Supabase pairs, retaining the **ThinkPad as primary compute** with replicated reads and latency-based routing.

PariBelle Ecosystem | Commerce and operations — paribelle.in | GitHub

- Built a Next.js/React storefront and NestJS/PostgreSQL REST API with Amazon SP-API integrations.
- Built **POM** to unify marketplace orders, dispatch, returns, and finance, replacing an **INR 42,000/year** SaaS subscription.
- Built **Seelie**, an AI operations agent with tool execution, scheduled routines, persistent chats, and approval controls for publishing and advertising; operate Docker deployments with cloud fallbacks.

Dodo | Mojo web framework — GitHub

- Built HTTP/1.1, HTTP/2, TLS, WebSockets, an HTTP client, typed handlers, native database drivers, and SQL migrations; fuzz-tested protocol parsers.
- Packaged **Dodo 0.0.1** for Modular's modular-community channel; PR #447 **merged November 7**, with builds/tests on macOS ARM64 and Linux ARM64/x86-64.
- Next: profile server hot paths and add CLI/MCP tooling, supervised AI/GPU workers, and computer vision support.

TECHNICAL SKILLS

Languages and frontend TypeScript, Python, C++, Mojo, SQL, React, Next.js, React Native

Backend and AI FastAPI, NestJS, Hono, REST APIs, LangGraph, PyTorch, Triton, OpenCV, CUDA

Data and infrastructure PostgreSQL, Redis, pgvector, AWS EC2, Docker, Kubernetes, Linux, Cloudflare

EDUCATION

Manipal University Jaipur | B.Tech, Computer Science and Engineering | 2022 - 2026

CGPA 9.28/10 | Dean's List and Student Excellence Award, all 8 semesters | Vice Chair, IEEE GRSS
